

GRAPHIC PROCESS AUTOMATION

The GAK Blaster Adhesive Applicator is designed to compliment the Edge to Edge Printing or Simulated Belt Prints that are currently popular. Utilizing our GAK Adhesive the GAK Blaster has a blower that opens the shirt so that a mist of adhesive can fill the inside of the shirt and out the sleeves. Then laying the shirt flat to prep the shirt for multi-color edge to edge printing. Our All-Over Print Pallets complete the set-up.
